DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim 3 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim is dependent on claim 2 which is cancelled.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 11, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 6,084,535 (Karabed et al).

Regarding claim 17, Karabed discloses in figure 9 an input (elem. b) which receives a sequence of m message bits of a message word and means for mapping (elem. 906-914) the sequence of m message bits of the message word to a codeword, of length n bits generated from the m message bits using algebraic operation (figures

Application/Control Number: 10/084,040

Art Unit: 2819

10-14; col. 13-15) by generating a plurality of codeword candidates and selecting (elem. 916) one of the plurality of codeword (elem. 906-914) candidates based upon an optimizing criteria (elem. 902) (col. 11, starting lines 26 to col. 13, ending at line 57).

Regarding claim 18, Karabed teaches in figure 9 for mapping a plurality of parallel processing branches (elem. 906,908,910,912,914) each generating a different codeword candidate from the ma message bits using algebraic operations (figures 10-14; col. 13-15) and a selector (elem. 916) for selecting one of a plurality of codeword candidates, based upon an optimizing criteria (elem. 902).

Regarding claim 11, Karabed discloses in figure 9 the following:

An input (elem. b) which receives a sequence of m message bits of a message word;

A plurality of parallel processing branches (elem. 906,908,910,912,914) each generating a different codeword candidate from the ma message bits using algebraic operations (figures 10-14; col. 13-15) and

A selector (elem. 916) for selecting one of the plurality of codeword candidates, each generated by a different one of the plurality of parallel processing branches based upon an optimizing criteria (elem. 902) (col. 11, starting lines 26 to col. 13, ending at line 57).

Regarding claim 1, Karabed discloses in figure 9 an input (elem. b) which receives a sequence of m message bits of a message word and means for mapping (elem. 906-914) the sequence of m message bits of the message word to a codeword, of length n bits generated from the m message bits using algebraic operation (figures

10-14; col. 13-15) by generating a plurality of codeword candidates and selecting (elem. 916) one of the plurality of codeword (elem. 906-914) candidates based upon an optimizing criteria (elem. 902) (col. 11, starting lines 26 to col. 13, ending at line 57). Claim 1 restates the same limitations above in method format, therefore, it is rejected with the same rationales as rejected in claim 17.

Page 4

Allowable Subject Matter

Claims 3-10, 12-16, and 19-21 are objected to as being dependent upon a rejected base claim, but they would be considered allowable if they are rewritten in independent form including all of the limitations of the base claim and any intervening claims. The objected claim features are not taught or suggested by prior art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM T. MAI whose telephone number is (571)272-1807. The examiner can normally be reached on 6:00 am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Tokar can be reached on (571) 272-1812. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
